Children's medicines are formulated to deliver the right amount of medicine to your little one. No matter the medicine or brand, always read and follow the label on the bottle before giving a dosage. Only the dosing device provided with the product should be used to measure the proper amount of medicine. Ask your healthcare professional about dosages for children under 2 years of age. For more information on administering children's medication, ask your pediatrician. If possible, use weight to dose, otherwise use age. Do not exceed more than five doses in 24 hours. If you have questions or concerns about mis dosage or a potential overdose, please call the American Association of Poison Control Centers.
